Public seating chair with 4 legs

Produc

Valid to

Nordic Comfort Products AS

Manufacturer

The PUBLIC-chair from Nordic Comfort Products AS, designed by Anderssen & Voll AS, is a new and modern chair shell that comes with different bases for different uses. It comes with a lifting lip on the top edge of the chair to ease lifting and moving. Along with the low weight this facilitates the handling of the chair. PUBLIC comes in a modern colour palette ranging from neutral to more playful shades. As in all our products the main focus is great comfort and lasting quality. The sheell can also be delivered in 100% recycled plastic.

Declaration number:

ÞÒÚÖËFÏÏÎËÍ€ËÒÞ

This declaration is based on Product Category Rules:

PCR for Seating Solution, NPCR 003:2015

Declared unit:

PUBLIC seating chair with steel base

Declared unit with option:

Look at page 6.

Functional unit:

Production of one seating solution provided and maintained for a period of 15 years.

This EPD has been worked out by:

The declaration has been developed using Furniture EPD Tool Version 1.1.2, Approval: NEPDT04 Company specific data collected and registered by:

Data Collector Stefan Olsen Company specific data audited by:

Data Auditor Svein-Erik Hjerpbakk

Verification:

Independent verification of data, other environmental information and EPD has been carried out in accordance with ISO14024, 8.1.3. and 8.1.4.

Product

Product Description and Application

The PUBLIC seating chair from NCP is made of Polypropylene plastic in the seat/back fixed to a steel or wood base. The steel base can be painted in matching colours with the seatshell. The PUBLIC chair is stackable and available in a variety of bases, in combination with matching textiles. The PUBLIC chair has the MØBELFAKTA certificate.

Product manufactured from 1% recycled material At end of life product contains 100% recyclable material

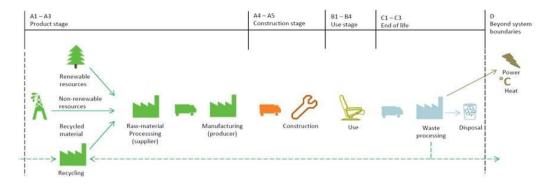

LCA: Calculation rules

Declared unit:

PUBLIC seating chair with steel base

System boundary:

Life cycle stages included are described in figure and through the corresponding letter and number designations in the

Data quality:

Specific manufacturing data from 2014 are used. Data from Ecoinvent and Østfoldforskning databases are used as the basis for raw materials and energy carrier production. See [6]

Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows that are included with very small amounts (<1%) are not included. This cut-off rule does not apply for hazardous materials and substances

Allocation:

Where virgin materials are used, emissions and energy consumption connected with extraction and production are included.

Where recycled materials are used in the product, emissions and energy consumption related to the recycling process are included.

Emissions from incineration are allocated to the product system that uses the recovered energy.

Emissions from incineration of waste are allocated to the product system that uses the recovered energy.

LCA: Scenarios and additional technical information

Transportation to an average customer in Norway is 800 km (A4: average European lorry > 32 tonnes)

In the end of life stage, the transport distance for waste to waste processing is 72 km (C1). The reuse, recovery and recycling stage is beyond the system boundaries (D). It is assumed that the solution is dismantled and the materials recycled or combusted according to general Norwegian treatment of industrial waste (see the table below). This calculation includes only CO2 emissions (GWP) in the C-modules. The transport distance to reuse, recovery or recycling varies for each material, but the average distance is 373 km. The vehicles used and associated data are described in detail in [5].

| | Material recovery | Energy recovery | Disposal |
|-----------|-------------------|--------------------|----------|
| Aluminium | 70,1 % | 0,0 % | 30 % |
| Steel | 70,1 % | 0,0 % | 30 % |
| Plastic | 64,3 % | 30,8 % | 5 % |
| Cardboard | 94,5 % | 5,5 % | 0 % |

LCA: Results

Specific Norwegian requirements

Electricity

The electricity is assumed to be a mix from the Nord Pool mix in the Nordic countries. The Nordic Production mix for electricity is based on 2011 data.

Greenhouse gas emissions 0,0427 kg CO2 eqv/MJ (Nordic Production mix)

Dangerous Substances

None of the following substances have been added to the product: Substances on the REACH Candidate list of substances of very high concern, substances on the Norwegian Priority list and substances that lead to the product being classified as hazardsous waste. The chemical content of the product complies with regulatory levels as given in the Norwegian Product Regulations.

Indoor Environment

Our furniture doesen't contain any constituent parts that affect indoor climate.
